Computer Science Department
Web Applications and Technologies - COMP334
Midterm Exam 2nd Semester 2022/2033

Date: Tuesday, 20/06/2023

Choose Your Instructor: ☐ Dr. Yousef Hassouneh ☒ Mr. Saadeddin Hroub

Section: ☐ 1 M,W 10:05 - 11:25 ☐ 2 M, W 13:05 - 14:25 ☒ 3 T, R 10:05 - 11:25

Name: [REDACTED]

Student ID [REDACTED]

Time allowed: 70 minutes.

Total Marks: 80

Question One [10 marks]

You have given the HTML code below, which is written using non-semantic elements. **Re-write it** using the right HTML5 semantic elements, so it will be self-descriptive.

~~<div class="header">~~
~~// header, i am always on top~~
~~<div class="navigation">~~
~~// menu navigation~~
~~</div>~~
~~<div class="main-content">~~
~~// main content starts from here~~
~~<div class="content">~~
~~// body content~~
~~</div>~~
~~<div class="footer">~~
~~// footer goes here~~
~~</div>~~

5

Question Two [20 marks]

Create a static HTML page called "student.html", consisting of a form, its id is "studentInfo", and use the fieldset and legend tags to group the form's elements. It must have the following input elements, which are all mandatory:

- 2 text inputs to capture the student's first and last name; input elements' names are "firstName", "familyName", which must be alphabetical characters.
- 1 text input to capture student ID, input tag name is "stID", which must be 10 digit-length.
- 1 email input that captures student email, input tag name is "email".
- 1 selection input, its name is "favoriteSubjects", of the favorite subjects (Algorithms, Compiler, Networks, and Web Programming), it is allowed to select more than one subject. But at least one subject must be selected.

You must use descriptive labels for the input elements to make them accessible. Also, you should use HTML5 form validation attributes to validate user input.

The form must be submitted, using "post" method, to a PHP script called "stFavorites.php", which is located on a web server at the following domain "birzeit.edu.ps", within a folder called "students".

PF >

<!DOCTYPE>

<html>

<body>

<title> Web forms </title>

</body>

<head>

<Form action="stFavorites.php" method="post" id="studentInfo">

<fieldset>

<legend> student </legend>

<p>

<label> First name: </label>

<input type="text" name="firstName" />

</p>

<p>

<label> Family name: </label>

<input type="text" name="familyName" />

</p>

<p>

<label> Student ID </label>

<input type="text" name="stID" max=10 min=10 />

</p>

<p>

<label> Email: </label>

<input type="email" name="email" />

</p>

<p> <label> Favorite subject </label>

<select name="favoriteSubjects">

<option> Algorithms </option>

<option> Compiler </option>

<option> Networks </option>

<option> Web programming </option>

</select>

</p>

<input type="submit" name="submit" />

</fieldset>

</form>

</head>

</html>

Question Three [30 marks]

Write a PHP script called "stFavorites.php" that connects to the database and creates the necessary HTML page. The script should connect to a database called "stInfo", username "admin", password "comp334", and server "stdata.birzeit.ps.edu". The "stInfo" database consists of the schema, shown in the figure below; note that primary keys are underlined. USE PDO object to connect to the database and prepared statements with named binding parameters.

<u>Student</u>	0-1	1-N	<u>Favorites</u>
<u>stID</u> stFname stLname steMail			<u>stID</u> <u>subjectName</u>

The script should store the student's details in the "stInfo" database and display a confirmation message, if the student already exists in the database, then its favorite subjects should be updated, where update means appending a new subject to the "favorites" table. The confirmation message, where "Fulan" is the student's name, should have the following format:

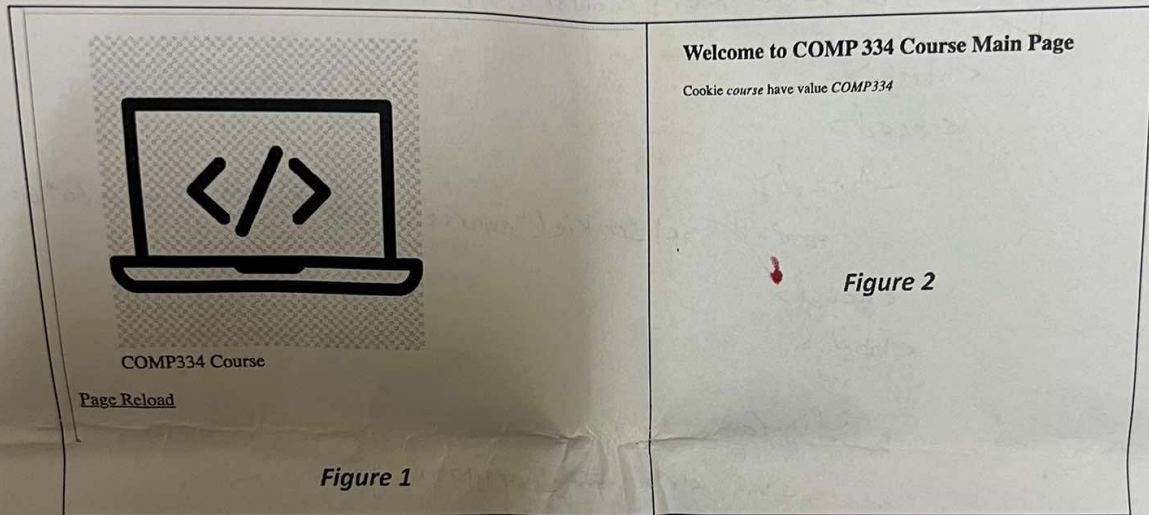

Dear Fulan your favorites subjects are:

- Algorithms
- Compiler

If no data has been sent to the script, the script should re-direct the user to the "student.html" page, which is located in the same folder.

Question Four [20 marks]

Write a PHP script, called "message.php", that creates a cookie with the name "course" and value "COMP334" in the user's browser. When the script is first invoked, and there is no cookie created yet, it should display an HTML page similar to the sample shown in Figure 1 below, use the figure tag, and assume the image name is "COMP334.jpeg". When the Script is reloaded, it should display an HTML page that displays a course welcome message as shown in Figure 2 Below.

~~<?php~~
~~<html>~~
~~<body>~~
